PRELIMINARY AMENDMENT

Box Patent Application  
Assistant Commissioner for Patents  
Washington, D.C. 20231

Dear Sir:

Please enter the following preliminary amendment into the above-referenced application.

ABSTRACT

Please insert the attached abstract into the application as the last page thereof.

CLAIMS

Please delete claims 1-16 as follows. Please enter new claims 17-36 as follows.

17. (NEW) A method for restoring a subscriber context in a network element of a mobile communication network, comprising the steps of:
- a) transmitting a restart information indicating whether a subscriber context has been updated after the latest restart;
  - b) continuing the use of a subscriber context updated after said latest restart; and
  - c) inactivating a subscriber context updated before the latest restart.
18. (NEW) A method according to claim 17, wherein said restart information is a restart counter value and is transmitted together with a context signaling message.
19. (NEW) A method according to claim 18, wherein said restart counter value is compared with a stored restart counter value so as to determine said subscriber context updated before the latest restart.
20. (NEW) A method according to claim 19, wherein said stored restart counter value is updated on the basis of said transmitted restart counter value.
21. (NEW) A method according to claim 17, wherein said restart information is transmitted only one time after said latest restart.

22. (NEW) A method according to claim 17, wherein said network element is GPRS support node, and wherein said restart information is transmitted together with a tunnel management signaling message.

23. (NEW) A method according to claim 22, wherein said subscriber context is a PDP context.

24. (NEW) A method according to claim 17, wherein said restart information is transmitted separately or in a separate message.

25. (NEW) A method according to claim 24, wherein said restart information is a restart counter value.

26. (NEW) A system for restoring a subscriber context in a network element **(20)** of a mobile communication network, comprising:

- a) transmitting means **(10)** for transmitting to said network element **(20)** a restart information indicating whether a subscriber context has been updated after the latest restart;
- b) wherein said network element **(20)** comprises receiving means **(21)** for receiving said restart information, and control means **(24)** for continuing the use of a subscriber context updated after said latest restart and for inactivation a subscriber context updated before said latest restart, in response to said restart information.

27. (NEW) A system according to claim 26, wherein said transmitting means (10) comprises a restart counter (13) for counting a restart number, and an adding means (14) for adding said restart number to a subscriber context message, and wherein said network element (20) comprises a comparing means (23) for comparing said restart number with a restart number stored in a storing means (22) and for supplying the comparing result to said control means (24).

28. (NEW) A system according to claim 26, wherein said control means (24) performs control so as to store a new subscriber context included in said subscriber context message and to delete an old subscriber context stored in said network element (20).

29. (NEW) A system according to claim 26, wherein said transmitting means (10) comprises a restart counter (13) for counting a restart number, and switching means for switching said restart number to said transmitting means (10) so as to be transmitted separately or in a separate message to said network element (20), and wherein said control means (24) is arranged to delete or inactivate corresponding subscriber contexts received before the latest restart.

30. (NEW) A system according to claim 26, wherein said network element is a GPRS support node (4,5) and wherein said subscriber context is a PDP context.

31. (NEW) A network element **(10)** for a mobile communication network, comprising transmitting means **(15)** for transmitting a restart information indicating whether a subscriber context has been updated after the latest restart.

32. (NEW) A network element according to claim 31, further comprising a restart counter **(13)** for counting a restart number, and adding means **(14)** for adding said restart number to a subscriber context message.

33. (NEW) A network element according to claim 31, further comprising a restart counter **(13)** for counting a restart number, and switching means for switching said restart number to said transmitting means **(10)** so as to be transmitted separately or in a separate message.

34. (NEW) A network element **(20)** for a mobile communication network, comprising:

- a) receiving means **(21)** for receiving a restart information indicating whether a subscriber context has been updated after the latest restart, and
- b) control means **(24)** for continuing the use of a subscriber context updated after said latest restart and for inactivating a subscriber context updated before said latest restart in response to said restart information.

35. (NEW) A network element according to claim 34, wherein said restart information is a restart number and wherein said network element **(20)**

comprises comparing means (23) for comparing said restart number with a restart number stored in a storing means (22) and for supplying the comparing result to said control means (24).

36. (NEW) A network element according to claim 31, wherein said network element is a GPRS support node (4,5) and wherein said subscriber context is a PDP context.

### REMARKS

The above preliminary amendment is made to insert an abstract page into the application, to delete claims 1-16 and to add new claims 17-36.

Applicant respectfully requests that this preliminary amendment be entered into the record prior to calculation of the filing fee and prior to examination and consideration of the above-identified application.

If a telephone conference would be helpful in resolving any issues concerning this communication, please contact Applicant's attorney of record, Michael B. Lasky at 952-912-0527.

Respectfully submitted,
